Invertebrate Tissue Culture: Applications in Medicine, Biology, and Agriculture comprises the proceedings of the IV International Conference on Invertebrate Tissue Culture, held on June 5-8, 1975 at Mont Gabriel, Quebec, Canada. The conference focuses on invertebrate organ, tissue, and cell culture, as well as cell culture limitations, pitfalls, and applications in medicine, biology, agriculture, neurophysiology, and studies of morphogenesis, differentiation, viruses, symbionts, and parasites. This reference material specifically provides information on sophisticated laboratory methods and on numerous utilizations of invertebrate cell culture techniques in medicine and biology. This book also elucidates the nutritional requirements and the establishment of cell lines. The study of viruses and protozoa of agricultural and forest importance is also shown. This book will be useful and stimulating to the readers and will provide in a single volume the results obtained in the diverse areas of research pursued by the leading exponents of invertebrate tissue culture from America, Europe, Asia, and Australia.

This book provides a practical guide to experimental methods for studying the development of invertebrate deuterostomes, such as sea urchins, ascidians, hemichordates, and amphioxus. These model organisms are of contemporary and historical importance to the study of developmental biology, particularly genomic research. The chapters provide detailed experimental protocols that cover a broad range of topics in modern experimental methods. Topics covered range from rearing embryos to the care of adult animals, while also presenting the basic experimental methods including light and electron microscopy, used to study gene expression, transgenics, reverse genetics, and genomic approaches. \* Covers a wide range of methods, from classical embryology through modern genomics \* Discusses animals related to vertebrates, providing a valuable evolutionary perspective \* Includes a practical guide to the use of sea urchins in the teaching laboratory
