Delta Woodworking Tools PORTER-CABLE and DELTA began early in the 20th Century (1906 and 1919 respectively) and were direct results of fulfilling the American Dream. For both companies, the principals had one goal in mind: to provide quality tools and products that made the work of journeymen and professional craftsmen easier.

There are several different sizes of routers to choose from with various amounts of power and speeds. Some people enjoy using a router with a diamond wheel accessory so they can detail glass and ceramic items. Routers can be frustrating at first, but don't be discouraged. Practicing with a router will show you exactly what it can and can do.

Stefano Spaccapietra Fred M aryanski Swiss Federal Institute of Technology University of Connecticut Lausanne, Switzerland Storrs, CT, USA REVIEW AND FUTURE DIRECTIONS In the last few years, database semantics research has turned sharply from a highly theoretical domain to one with more focus on practical aspects. The DS- 7 Working Conference held in October 1997 in Leysin, Switzerland, demonstrated the more pragmatic orientation of the current generation of leading researchers. The papers presented at the meeting emphasized the two major areas: the discovery of semantics and semantic data modeling. The work in the latter category indicates that although object-oriented database management systems have emerged as commercially viable products, many fundamental modeling

issues require further investigation. Today's object-oriented systems provide the capability to describe complex objects and include techniques for mapping from a relational database to objects. However, we must further explore the expression of information regarding the dimensions of time and space. Semantic models possess the richness to describe systems containing spatial and temporal data. The challenge of incorporating these features in a manner that promotes efficient manipulation by the subject specialist still requires extensive development.

Barcelona, Spain, April 1993, under the auspices of the DELTA programme of the European Commission. DELTA (Developing European Learning through Technological Advance) is the commission's technology R&D programme that concentrates on "Telematic Systems for Flexible and Distance Learning". The overarching goal of this programme is to contribute through information technology to more efficient and effective design, production, and delivery of learning material. The DELTA programme started its main phase in 1992 with a total of 22 projects and a total budget of 92. 4 million ECU. In the meanwhile an extension of the programme has resulted in 8 extensions of existing projects and 8 new projects, bringing the number of projects to 30, with a corresponding total budget of 99. 9 million ECU. The

programme has three main areas: telecommunication, delivery information systems, and design and production. In the projects, in total 201 organisations (industrial, commercial, and universities) from 12 European Union member states and 5 EFTA countries are represented. The DELTA programme pays much attention to the exchange of ideas and dissemination of information both between individual DELTA projects and between DELTA projects and other initiatives in the EU. Meetings in which DELTA projects are involved are held several times a year as so-called 'concertation meetings', meetings where also non-DELTA projects participate are called 'concerted actions'.

The Seventh Edition of TODAY'S TECHNICIAN: AUTOMOTIVE ENGINE PERFORMANCE is a comprehensive learning package designed to build automotive skills in both classroom and shop settings. Following current ASE Education Foundation criteria, this two-manual set examines each of the major systems affecting engine performance and drivability—including intake and exhaust, sensors, computerized engine controls, fuel, ignition, and emissions. The Classroom Manual addresses system theory, while a coordinating Shop Manual covers tools, procedures, diagnostics, testing, and service. The new Seventh Edition features updates to cover the latest automotive technologies and take automotive technician

Digital Literary Studies presents a broad and varied picture of the promise and potential of methods and approaches that are crucially dependent upon the digital nature of the literary texts it studies and the texts and collections of texts with which they are compared. It focuses on style, diction, characterization, and interpretation of single works and across larger groups of texts, using both huge natural language corpora and smaller, more specialized collections of texts created for specific tasks, and applies statistical techniques used in the narrower confines of authorship

attribution to broader stylistic questions. It addresses important issues in each of the three major literary genres, and intentionally applies different techniques and concepts to poetry, prose, and drama. It aims to present a provocative and suggestive sample intended to encourage the application of these and other methods to literary studies. Hoover, Culpeper, and O'Halloran push the methods, techniques, and concepts in new directions, apply them to new groups of texts or to new questions, modify their nature or method of application, and combine them in innovative ways.
