ETOPS is an acronym for Extended Operations. The International Civil Aviation Organization coined the acronym for Extended Twin Operations for twin-engine aircraft operation further than one hour from a diversion airport at the one-engine inoperative cruise speed, over water or remote lands, on routes previously restricted to three- and four-engine aircraft. The ICAO issues Standards and Recommended Practices for ETOPS, and ETOPS were extended to four-engine aircraft like the Boeing 747-8 and th

ETOPS is an acronym for extended range twin engine operations and is a set of rules governing the operation of twin engine aircraft at distances greater than one hours flying time in still air from adequate airports. An adequate airport is one equipped to support the diversion of the type of aircraft being operated.

Extended Range Twin Engine Operations - ETOPS

Extended-range twin-engine operations (ETOPS) have become common practice in commercial aviation over the last 15 years. Maintenance and operational programs for the twinjets used in these operations have received special emphasis, and reliability improvements have been made in certain airplane systems.
