Hip Sonography: Diagnosis and Management of Infant Hip ...
The Graf method for ultrasound classification system for developmental dysplasia of the hip (DDH) in infants, combines both alpha and beta angles. There are a number of additional subdivisions, which are often not used clinically. As a general rule, the alpha angle determines the type and in some instances, the beta angle is used to determine subtype:

Graf method for ultrasound classification of developmental ...
plays an important role in the diagnosis and management of these patients because the soft tissues surrounding the prosthetic joint are not obscured by artifacts and because sonography enables hands-on examination of the painful site, dynamic evaluation of moving structures, and comparison with the opposite side.
