Preface The problems in the book, "Elements of Information Theory, Second Edition", were chosen from the problems used during the course at Stanford. Most of the solutions here were prepared by the graders and instructors of the course. We would particularly like to thank Prof. John Gill, David Evans, Jim Roche, Laura Ekroot and Young Han Kim for their help in preparing these solutions.

$x, y. p(x, y) \log_2 p(x, y) = -(1-\varphi) \log(0.5(1-\varphi)) - \varphi \log(0.5\varphi) = (1-\varphi) - (1-\varphi) \log(1-\varphi) + \varphi - \varphi \log(\varphi) = 1 - \varphi \log(\varphi) - (1-\varphi) \log(1-\varphi)$  4. The mutual information is  $I(X; Y) = H(X) + H(Y) - H(X, Y)$ , which we can evaluate from the quantities above as:  $1 + \varphi \log(\varphi) + (1-\varphi) \log(1-\varphi)$ . 5.

the simplicity of the information diagram for a Markov chain is best explained as a special case of a Markov random field. Information inequalities are sometimes called the laws of information theory because they govern the impossibilities in information theory. In Chapter 13, the geometrical meaning of information inequalities and the relation
