Drying | Taylor & Francis  
Group~~

Rotary dryers are mainly used in the chemical and mineral industry. In the area of food, their most common applications are for dehydrating waste materials (citrus peels, vegetable trimmings) and animal feedstuffs (alfalfa). Rotary dryers consist of a metal cylinder with internal flights or louvers (Fig.

This handbook reviews many types of dryers and provides guidelines for their selection. Certain types of commonly used dryers are reviewed in detail. Since drying is an energy intensive operation, this handbook also provides information on techniques to improve efficiency. APV

~~rotary dryer and kiln design  
handbook~~

The drying takes place in rotary dryers, which consist of a cylindrical shell rotated upon bearings and usually slightly inclined to the horizontal. Wet feed is introduced into the upper end of the dryer and the feed progresses through it by virtue of rotation, head effect, and slope of the shell and dried product withdrawn at the lower end.

Industrial Drying | Taylor~~

~~...~~

Rotary dryers were more expensive to design than fluidized bed dryers. Operationally, however, it is the other way around due to the favored heat transfer achieved in rotary dryers. Conveyor?belt dryers lie somewhere between producing satisfactory results in terms of both design and operation.
